

## MicroSquirt

Connector to the MicroSquirt ECU. The Bootload jumper is to allow flashing new firmware. The connector must be wired with the same pinout as the MicroSquirt.

## MAP sensor

MAP Sensor Model: NXP MPX4250AP  
Unibody package

## TPS

As Vera does not have a throttle the throttle position sensor input is given a constant input.

## Connectors

## Relays

## Battery

Battery power is only connected to the main power relay, as well as the normally open bistable power switch controlling said relay.

## RS232 Serial Port

DB9 serial connector for mapping of MicroSquirt.

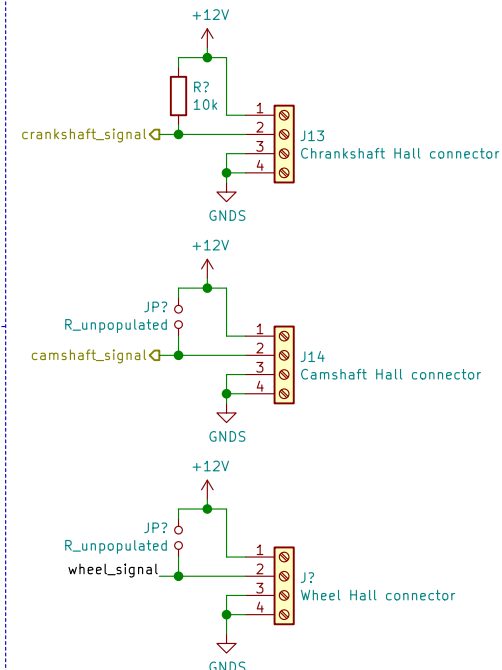

## EGO Lambda sensor

## Hall sensors

Hall Sensor Model: Littlefuse 55110-3M-03-A  
Crankshaft Sensor: CYKN8-02CLO  
Second ground is for potential shielding.  
Jumpers enable using other hall sensors.

## Start motor

The start motor power is switched by a normally open monostable switch.

## Intake Air Temperature

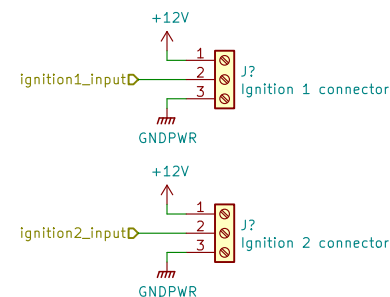

## Motor Coolant Temperature

## Ignition

The electrical system is designed to function with either one or two ignition coils. Currently it is only using Ignition 1.

## Injector

Injector input is switched by a normally open dead man's switch.

## Start motor controller

Interface to a separate circuit which handles timing of start motor depending on engine RPM.

## Cockpit connections

Connection to the Raspberry Pi based HMI. Button inputs for relay control of main power, starter motor and dead man's switch to injector.
